Professional Summary

Computer Science Engineering undergraduate (2026) with hands-on experience in Java, Spring Boot, REST APIs, SQL, AWS, and scalable backend application development. Strong foundation in Object-Oriented Programming, Data Structures Algorithms, DBMS, Operating Systems, and Computer Networks. Experienced in developing enterprise applications, API integration, and cloud-based systems with a passion for building high-quality software products.

Technical Skills

Languages: Java, SQL, JavaScript, Python

Frameworks & Backend: Spring Boot, Node.js, Express.js, REST APIs, JWT Authentication

Web Technologies: HTML, CSS, React.js, Tailwind CSS

Databases: MySQL, PostgreSQL, MongoDB, Snowflake, Prisma ORM

Cloud & Tools: AWS (EC2, S3), Git, GitHub, Linux, Langfuse

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks

Software Development: API Integration, Agile/Scrum, Debugging, Technical Documentation, Data Structures, ETL Pipelines, Data Warehousing, Data Visualization, Power BI

Education

B.E. Computer Science Engineering, Chitkara University

2022 – 2026

CGPA: 8.79

Experience

Software Developer Intern

May 2025 – April 2026

Innova Solutions, Hyderabad

- Developed, tested, and maintained 10+ RESTful APIs using Node.js, Express.js, and MongoDB following modular software design principles and clean coding practices.
- Executed MySQL-to-Snowflake migration workflows using AWS services, ensuring reliable data transfer, validation, and transformation of large-scale datasets.
- Collaborated with the Data Science team on client projects involving data preprocessing, exploratory analysis, visualization, and business reporting to generate actionable insights.
- Built analytical dashboards and reports to improve trend identification, operational visibility, and decision-making processes.
- Implemented monitoring and evaluation pipelines for AI-powered workflows using Langfuse, enhancing observability and performance tracking.
- Contributed to AWS and Snowflake-based ETL pipelines processing large volumes of data for analytics and reporting use cases.

Projects

BillSutra – AI-Powered Billing & Inventory Management SaaS

- Developed a full-stack SaaS billing and inventory management platform using React.js, Node.js, Express.js, PostgreSQL, and Prisma, featuring secure JWT authentication, customer management, product management, invoicing, and business settings.
- Engineered a GST-ready invoicing system with real-time tax calculations, automatic inventory updates, payment tracking (Paid/Pending/Partial), professional PDF invoice generation, and customer ledger reports.
- Designed and implemented a modern SaaS architecture with protected routes, role-based authentication, responsive dashboards, analytics, inventory history (Stock In/Out), expense management, and reusable UI components following a premium design system.
- Built an end-to-end subscription management workflow including user registration, free trial support, manual UPI payment verification, admin approval dashboard, email notifications, and subscription activation logic for SaaS deployment.

JobCompass AI – Smart Job Application Tracking Platform

- Building a full-stack job application tracking platform using Java, Spring Boot, MySQL, and React.js to manage applications and hiring workflows.
- Implementing Spring Security and JWT-based authentication for secure user access and session management.
- Developing scalable REST APIs using Spring Boot and Spring Data JPA for application tracking, interview scheduling, and analytics.
- Integrating AI-powered resume matching, ATS scoring, and skill-gap analysis using LLM APIs.
- Designing dashboards to visualize application performance, hiring trends, and in-demand technology skills.
